

Bastian Ilsø Hougaard

Curriculum Vitae

Who I am

I usually describe myself with the keywords *self-discipline*, *organization*, *engagement* and *development*. I take the initiative and maintain an overview of each task from the beginning to the end in everything I do. My goal is to learn from what I accomplish and at the same time attempt to keep what I do entertaining.

Key abilities

- I am very practical when it comes to using computers. I am well known with both Windows and Linux environments which I use on a daily basis. I am adaptive and I pick up on new software easily.
- I want to apply as much theory in my work as possible. In software, I rely on intuition, but my work always rely on what I have learned.
- My engagement and organization makes it an advantage for me to lead projects. I strive for the best results possible and encourage those that I work with in order to achieve this.
- Since primary school, my brain has been described as "curly". I strive to be creative in whatever I do and am great at getting ideas.

IT tools I use

I primarily use Blender, Inkscape and GIMP to cover my interests in drawing, modelling and video editing. I also design websites through HTML/CSS, often using the Wordpress content management system as backend. Furthermore I understand and can write software in Java/Processing and C++/OpenCV.

Apart from that, I work in office software such as MS Office, LibreOffice, Scribus, LaTeX and GnuCash daily. I also have past experience with Autodesk 3ds max, Paint.NET and Pinnacle Studio.

Job experience

| | |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------|

At home

Most of my free time is spent developing my technical and creative skills. Apart from that I attend social events whether it be geeky game nights or parties. I also train several times a week, involving running and strength exercises. Earlier on, I used to play tennis, soccer and golf frequently as well.
